Darwin Library Release Notes

> *As of version 6.8.0 the Comscore Library binaries are delivered as XCFramework.* The libraries are no longer available as a fat binary.

Library Version 6.18.0

Release Date: September 22, 2026

Data Collection Model Version: 6.9

Supported iOS Versions: 15 - 27

Supported iPadOS Versions: 15 - 27

Supported tvOS Versions: 15 - 27

Binaries compiled with: Xcode 27

Feature changes:

1. (TAG-9730) Prevent the use of deprecated API methods for retrieving screen and window resolution.

   Description: iOS/iPadOS/tvOS 26 deprecated the use of the API methods we use for retrieving screen and window resolutions. The replacement API methods require execution on the main (UI) thread creating risk of UI blocking. These values are of less importance to current reporting so we have decided to deprecate collection of these values.

   Resolution: Collect `0x0` (the default value) for display resolution (`ns_ap_sd`), dimensions (`ns_ap_res`) and screen location (`ns_ap_po`).

Bug fixes:

- There were no known bugs for this release.

Known issues and limitations:

- There were no known issues for this release.

Library Version 6.17.0

Release Date: June 16, 2026

Data Collection Model Version: 6.9

Supported iOS Versions: 15 - 26

Supported iPadOS Versions: 15 - 26

Supported tvOS Versions: 15 - 26

Binaries compiled with: Xcode 26

Feature changes:

1. (TAG-9422) Add CocoaPods deprecation notices.

   Description: CocoaPods Trunk will be made read-only on December 2, 2026.

   Resolution: Add a deprecation flag to the PodSpec file and deprecation notices to the README file and Implementation Guide whilst

continuing to publish updates throughout the year until CocoaPods Trunk is made read-only.

Bug fixes:

1. (TAG-9545) Prevent application deadlocks caused by a listener pattern.
   Description: A listener pattern has a concurrency issue that can cause application deadlocks.
   Resolution: Create a dedicated thread-safe class that eliminates the concurrency issue.

Known issues and limitations:

- There were no known issues for this release.

Library Version 6.16.0

Release Date: February 5, 2026
Data Collection Model Version: 6.9
Supported iOS Versions: 15 - 26
Supported iPadOS Versions: 15 - 26
Supported tvOS Versions: 15 - 26
Binaries compiled with: Xcode 26

Feature changes:

1. (TAG-9510) Add an API method to identify streaming media consumption of child-directed content.
   Description: Some content assets in the Playback Session could be child-directed even though the app itself is not child-directed. While there is a mechanism to indicate the app itself is child-directed, there is no mechanism to indicate just a particular streaming media asset as child-directed.
   Resolution: Add API method `setChildDirectedPlaybackSessionEnabled` on `SCORStreamingAnalytics`. This method can be used to indicate whether or not a Playback Session has child-directed assets.

Bug fixes:

- There were no known bugs for this release.

Known issues and limitations:

- There were no known issues for this release.

Library Version 6.15.0

Release Date: September 11, 2025
Data Collection Model Version: 6.8
Supported iOS Versions: 12 - 18
Supported iPadOS Versions: 12 - 18
Supported tvOS Versions: 12 - 18
Binaries compiled with: Xcode 16

Feature changes:

1. (TAG-8750) The format of the server response for `getActivationCategories` has been changed.

Description: The format has been changed to just JSON.

Resolution: Account for the new format and ensure the API method continues to return the expected response when used.

Bug fixes:

- There were no known bugs for this release.

Known issues and limitations:

- There were no known issues for this release.

Releases from 2024 and earlier have been removed from the release notes.
